

Prevathon® for Grasshopper Control in Pastures

Prevathon® has a Section 2 (ee) of FIFRA for use in grass forage fodder and hay (rangeland and pasture grass) in the state of Texas for control of grasshoppers.

Apply Prevathon® at 8.0 to 16.0 oz/acre. For best results with foliar sprays, add Methylated Seed Oil (MSO) adjuvant at 1 gallon per 100 gallons of spray volume (1% v/v).

Do not apply more than 60 oz of Prevathon® per acre per crop.

Do not make more than 2 applications per acre per crop. The minimum retreatment interval is 7 days.

The preharvest interval is 0 days. The field re-entry interval is 4 hours.

For best results applications should be made when eggs have hatched and the majority of the grasshopper population is 2nd – 3rd instar nymphs.

Read and follow all applicable directions, restrictions, and precautions. The Label is the Law!
